

Install

First install the dependencies

```
composer update
composer install
npm install
npm run build
cp .env.example .env
```

Run

before you run for the first time (only for the first time)

```
php artisan key:generate
php artisan migrate
php artisan storage:link
```

Create Admin

```
php artisan make:admin admin1 admin@admin.admin adminos
```

Run the servers on two different terminals.

```
php artisan serve # for the backend, first terminal
npm run dev # for the frontend, second terminal
```

to clear the db and test with new data

```
php artisan migrate:fresh
```

maybe

```
php artisan cache:clear
php artisan config:clear
php artisan route:clear
php artisan view:clear
```
